

<div>1</div> <div>compact particle</div>	<div>2</div> <div>fragile aggregates</div>	<div>3</div> <div>columns and needles</div>	<div>4</div> <div>hexagonal planar crystal</div>	<div>5</div> <div>rimed aggregates</div>
<div>Quasi-spherical, densely rimed graupel-like particles. compact silhouette / solid main body. no sizeable thin parts.</div> <div>  </div>	<div>Weakly linked aggregates. Non-recognisable crystal habits. fragile / flaky looking. Many small protruding appendages</div> <div>  </div>	<div>Distinct single columns or needles. Depositional growth only.</div> <div>  </div>	<div>Single hexagonal plates and stellar dendrites. Sixfold symmetry.</div> <div>  </div>	<div>no rimed aggregates for 2DS.</div>
